## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-40, 53-61 and 133-136, drawn to methods of promoting wound healing using a compound comprising the amino acid sequence LKKTET or conservative variants thereof.

Group II, claim(s) 47-49, drawn to methods for ameliorating a wound healing disorder associated with thymosin beta4.

Group III, claim(s) 50, drawn to method of identifying a compound that modulates wound healing.

Group IV, claim(s) 62-67, drawn to a pharmaceutical composition comprising a wound healing polypeptide comprising the amino acid sequence LKKTET and conservative variants thereof.

Group V, claim(s) 68-132, drawn to methods of treating inflammation comprising administering a compound comprising the amino acid sequence LKKTET or conservative variants thereof.

2. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The invention of Group IV was found to have no special technical feature that defined the contribution over the prior art of Malinda *et al.* (FASEB Journal, 1997, Vo. 11, No. 6, pages 474-481) (see entire document).

Malinda *et al.* teaches and claims a peptide comprising the amino acid sequence LKKTET and the compounds function in modulating cell migration.

Art Unit: 1654

Since Applicants' inventions do not contribute a special technical feature when viewed over the prior art they do not have a single general inventive concept and so lack unity of invention.
